Summary

Lead AI/ML Engineer and Tech Lead at CGI's AI Center of Excellence with 5+ years delivering LLM agents, RAG platforms, and ML systems to enterprise production for major banks and insurers. Two-time CGI Impact Award winner spanning agent architecture, evaluation, technical leadership, and multi-cloud AI delivery.

Technical Skills

Languages: Python, Java, Go, SQL (T-SQL, PostgreSQL), JavaScript, C++
AI/ML: PyTorch, LangGraph, Retrieval-Augmented Generation (RAG), AI agents, agentic workflows, Model Context Protocol (MCP), Large Language Models (LLMs), FAISS, Pinecone, OpenAI API, vLLM, JAX
Data/Streaming: Apache Spark, Kafka, Airflow, Data Lineage (OpenLineage), Redis
Cloud/Infra and Systems: Azure, GCP, AWS, Docker, Kubernetes, Terraform, Microservices, gRPC, CI/CD

Experience

CGI Inc. — Toronto, ON

Lead AI/ML Architect | Tech Lead, AI Center of Excellence — Jan 2025 – Present

- CGI Impact Award 2026: Led development of an LLM-powered Email Agent for enterprise email workflows, achieving 89% autonomous handling across 2,000+ emails per month.
- Lead architecture and development of an AI agent for a proprietary legacy programming language, combining LangGraph orchestration, RAG, vLLM-served models, grammar-constrained generation, PII controls, and business-rule extraction; projected to reduce manual effort by 50% and support legacy-system migration.
- Architected a scalable agent evaluation pipeline with SME-adjudicated rubrics, reference cases, regression suites, and calibrated LLM-as-a-Judge evaluators for decision tasks with noisy and conflicting human labels.
- Drive technical direction across 13+ AI initiatives for TD Bank's compliance SBU, guiding architecture and delivery across a cross-functional team of about 20.

Data Architect and Engineering Lead, Senior Consultant — Aug 2023 – Dec 2024

- CGI Impact Award 2024: Architected and shipped an LLM-powered enterprise RAG chatbot (LangChain, Azure/AWS/GCP); achieved ~90% autonomous resolution for a 50,000+ user base and delivered 525% ROI in 12 months. Product Page, Coverage
- Built an OpenLineage-based data lineage tool auto-documenting extensible multi-source data flows, with LLM-assisted root-cause analysis for production incident investigation.
- Automated AxiomSL regulatory rule updates at RBC with LLMs, reducing manual update effort by ~80%.

Data Engineer, Consultant — Aug 2021 – Jul 2023

- Shipped a machine learning (Gradient-Boost + Logistic Regression) loss-ratio model that lifted recovered fraud losses 321% vs a top-5 bank benchmark, batch-scoring in a Python/T-SQL pipeline.
- Managed Canada's largest automobile-insurance policy-history database (2TB, SQL Server) with 99.9% uptime and under 200 ms median queries; built production ETL/ELT pipelines for 22+ data marts, cutting report runtime from 30 min to 5 min.

Elder Laboratory, York University — Toronto, ON

Research Assistant, Computer Vision (part-time) — May 2020 – Aug 2021

- AttentiveVision, a CNN-LSTM hockey-broadcast analytics pipeline (PyTorch/TensorFlow, OpenCV): 70%+ mAP event detection, player tracking under 100 ms at 30 FPS, Cohen's kappa 0.92+ annotation reliability.

Education

York University — Toronto, ON
Bachelor of Science in Computer Science, Specialized Honours — Sep 2017 – Apr 2020

GPA: 3.9/4.0; First in Class; Dean's List (all semesters)

Certifications

Microsoft Certified: Azure Solutions Architect Expert, Google Cloud Professional Cloud Developer
